

Air Barrier Paper Eltete VCL 180

Laminated, net-strengthened and breathing vapour-control four-layer paper. This product is especially suitable for the vapour control of natural fibre and hygroscopic materials when a breathing structure is desirable. Due to its laminated and net-strengthened structure, it can be used as a supporting layer for the insulation, together with the resting sparse planking. Made in Finland. CE-marking and M1-classification.
